

Web Design Assignment

How-To Guide

The Web Design Assignment represents 8% of the overall course grade.

Instructions

Design, develop and publish a responsive web site using recommended design practices. Your web site will contain a home page and three content pages. Create an external style sheet (.css file) that configures text, colour and layout. No font tags, embedded CSS or inline CSS is allowed. You must publish your project to the Internet. Your website must be on one of the following topics:

- Sport
- Music
- Comedy
- Any other topic that provides substantial, relevant, and clearly structured content

Required features of the pages include:

- Appropriate meta tags.
- One page utilising tables effectively to display meaningful tabular information.
- One e-mail hyperlink, the email link should be in the footer contact section.
- One external hyperlink to a working website that makes sense in the context.
- Consistent banner logo area.
- Consistent main navigation that is usable and logical.
- Association with external style sheet (.css file).
- Use of Bootstrap to support responsive layout and structure (e.g. grid system and navigation components).
- One Bonus Feature: YouTube video, CSS image gallery, or CSS Transition
- Popular browsers (including Chrome, Edge, and Firefox) must render each page correctly.
- Your work should use the mobile-first approach for good responsive behaviour.

The goal of the assignment is to demonstrate how you are thinking about putting course concepts, models, tools and practices in your own context to demonstrate the module learning outcomes.

- Construct semantically correct web pages using HTML5
- Implement responsive web layouts using CSS techniques and Bootstrap
- Manage a basic web project using GitHub
- Develop accessible and user-friendly pages incorporating UI/UX design principles
- Leverage AI assistance in a web project

Project Details

Your web project should include the following:

1. **Planning Analysis Sheet.** Using a word processor, write a Planning, Analysis Sheet that includes the following headings:
 - Website goal – describe the goal of your website in one or two sentences: what results do I want to see?
 - List the working title of each page on your site. What information do I need?
 - List of sources (facts, text, graphics, sound, video) you will use in the pages above
 - Briefly explain how you used current software development approaches, including how Artificial Intelligence supported your coding productivity. Make sure to provide screenshots and clearly reference the ways AI contributed to your workflow.
 - **Site Map:** Using a word processor, draw a flowchart (storyboard) of your website that shows the hierarchy of pages and relationships between pages.
 - **Wireframe:** Use a graphics or wireframing application to create a wireframe for a sample page on your website that clearly shows the logo, navigation, content and footer areas. Save as .png, or .jpg and include it in your sheet.
 - Include a link to your GitHub Repository that holds your project code and shows best GIT practices like:
 - Branching.
 - Proper commits and commit history.
 - Includes a README file that is describing the project and the tech stack.
2. **HTML & CSS.** You are free to use any IDE to create your website. You must show evidence that you have written the code by including comments where appropriate and ensuring that all required web page elements are present. The website should be visually appealing and suitable for the target audience. Follow recommended web site design practices available at <https://terrymorris.net/bestpractices/>
3. **Hosting.** You must host your website and supply the URL in your Planning Analysis Sheet document. You will use GitHub pages to host your site online. You can find the details on how to do this at <https://pages.github.com>

Responsive Design – Points to Consider

- Ensure navigation automatically adapts for smaller screens so all menu items remain usable.
- The layout should avoid any **horizontal scrolling at 375px width**.
- Text must stay **legible without zooming**, maintaining a comfortable reading size on mobile.
- Images should **scale proportionally**, keeping their clarity on all screen sizes.
- Use **planning analysis sheets, site maps, and wireframes** to organise structure before development begins.

Accessibility Practices

- Provide meaningful **alt text** for all images to support screen readers.
- Maintain a **logical heading hierarchy** so content is easy to navigate and understand.
- Ensure colours meet **contrast accessibility standards** for readability and inclusivity.

Preparing Your Submission

Submit your Planning Analysis Sheet separately as a .pdf or .docx file. The maximum allowed word count is **1000**. The table of contents page and references pages do not count towards the total. A 10% tolerance above or below the stated limit is admissible.

Create a ZIP file containing only your Site Map, Wireframe, and all HTML and CSS files. Submit the ZIP file as your final website package. **Do not include your Planning & Analysis Sheet in the ZIP file. The Planning & Analysis Sheet must be submitted separately as .pdf or .docx file.**

See the next page on how you will be assessed.

Note: Any sources or content which are not your own work should be clearly cited. Work containing unoriginal content which is not clearly acknowledged will fail if, in the judgment of the assessor, the amount of original work is insufficient to demonstrate achievement of the Learning Outcomes. For the avoidance of doubt, content produced by artificial intelligence, e.g., an AI chatbot, does not constitute your own work.

How You Will Be Assessed

The following rubric describes how the essay will be assessed:

Demonstrate ability to construct semantically correct HTML5 pages	Show ability to implement responsive layouts using CSS & Bootstrap	Demonstrate ability to manage a web project using GitHub	Show ability to develop accessible, user-friendly pages using UI/UX principles	Demonstrate ability to leverage AI assistance in a web project
Distinction Criteria				
Demonstrates outstanding construction of clean, semantically correct HTML5 pages.	Shows outstanding implementation of highly responsive layouts using CSS and Bootstrap.	Demonstrates outstanding GitHub project management with clear, meaningful commit history.	Shows outstanding development of accessible, user-friendly pages with clear UI/UX design.	Demonstrates outstanding use of AI tools with clear, high-quality evidence of AI enhancing productivity.
Merit Criteria				
Demonstrates strong construction of semantically correct HTML5 pages, with minor refinements possible.	Shows strong implementation of responsive layouts using CSS and Bootstrap.	Demonstrates strong GitHub project management with consistent commits.	Shows strong development of accessible, user-friendly pages, with some refinements possible.	Demonstrates strong use of AI tools with clear evidence of assistance.
Pass Criteria				
Demonstrates adequate construction of basic semantically correct HTML5 pages.	Shows adequate implementation of responsive layouts using CSS and/or Bootstrap.	Demonstrates adequate GitHub usage with basic commit history.	Shows adequate development of user-friendly pages with some accessibility considerations.	Demonstrates some use of AI tools, including at least one screenshot or note showing AI assistance.
Unsatisfactory Criteria				

Demonstrates inadequate construction of semantically correct HTML5 pages.	Shows inadequate implementation of responsive layouts; pages may not adapt well.	Demonstrates poor or inconsistent GitHub usage.	Shows inadequate application of UI/UX or accessibility principles.	Provides insufficient or unclear evidence of AI assistance.
Clear Fail Criteria				
Demonstrates no evidence of constructing semantically correct HTML5 pages.	Shows no evidence of responsive layout implementation.	Demonstrates no meaningful use of GitHub.	Shows no evidence of UI/UX or accessibility considerations.	Shows no evidence of AI assistance.
No Attempt Criteria				
No submission	No submission	No submission	No submission	No submission
